MULTIPLE CHOICE

1. What type of tissue binds together and supports the various structures of the body?
   a. Epithelial
   b. Connective
   c. Muscular
   d. Nervous
   ANS: B  REF: 3

2. The lowest level of structural organization in the human body is the ____ level.
   a. molecular
   b. cellular
   c. chemical
   d. atomic
   ANS: C  REF: 3

3. What type of tissue covers internal and external surfaces of the body?
   a. Muscular
   b. Connective
   c. Nervous
   d. Epithelial
   ANS: D  REF: 3

4. A body system consists of an association of organs that share a common function.
   a. True
   b. False
   ANS: A  REF: 3

5. How many individual body systems comprise the human body?
   a. 22
   b. 13
   c. 10
   d. 8
   ANS: C  REF: 3

6. How many separate bones are found in the adult human body?
   a. 181
   b. 215
   c. 206
   d. 236
   ANS: C  REF: 4

7. Which system of the human body is responsible for the elimination of solid waste?
   a. Circulatory
   b. Respiratory
   c. Urinary
   d. Digestive
   ANS: D  REF: 4

8. Which of the following systems of the human body includes all ductless glands of the body?
   a. Endocrine
   b. Integumentary
   c. Muscular
   d. Glandular
   ANS: A  REF: 6

9. Which of the following body systems helps to regulate body temperature?
   a. Circulatory
   b. Urinary
   c. Endocrine
   d. Nervous
   ANS: A  REF: 4

10. Which of the following bones is part of the axial skeleton?
    a. Radius
    b. Hip bone
    c. Clavicle
    d. Sternum
    ANS: D  REF: 7
11. How many bones are there in the adult axial skeleton?
   a. 206
   b. 80
   c. 54
   d. 126
   ANS: B  REF: 7

12. What is the name of the small oval-shaped bone found in tendons?
   a. Wormian
   b. Tendinous
   c. Irregular bones
   d. Sesamoid bones
   ANS: D  REF: 8

13. Which of the following bones is classified as a long bone?
   a. Carpal bone
   b. Scapula
   c. Cranium
   d. Humerus
   ANS: D  REF: 8

14. What is the name of the dense fibrous membrane that covers bone?
   a. Cancellous portion
   b. Periosteum
   c. Diploë
   d. Medullary portion
   ANS: B  REF: 9

15. Which of the following bones is classified as a short bone?
   a. Vertebrae
   b. Phalanges (toes)
   c. Scapulae
   d. Carpal (wrist bones)
   ANS: D  REF: 9

16. Which of the following is a secondary growth center for endochondral ossification?
   a. Diaphysis
   b. Epiphyses
   c. Metaphysis
   d. Articular cartilage
   ANS: B  REF: 10

17. Which aspect of the long bones is responsible for the production of red blood cells?
   a. Compact bone
   b. Periosteum
   c. Medullary cavity
   d. Spongy or cancellous bone
   ANS: D  REF: 9

18. Examples of “flat” bones are the:
   a. calvaria, ribs, scapulae, and sternum.
   b. ribs, sternum, patella, and ilia of pelvis.
   c. sternum, scapulae, ilia of pelvis, and base of cranium.
   d. sternum and ilia of pelvis only.
   ANS: A  REF: 9

19. What is the primary center for bone growth termed?
   a. Epiphyses
   b. Diaphysis
   c. Metaphysis
   d. Epiphyseal plate
   ANS: B  REF: 10

20. Which of the following is NOT a functional classification of joints?
   a. Synarthrosis
   b. Amphiarthrosis
   c. Cartilaginous
   d. Diarthrosis
   ANS: C  REF: 11
21. The structural term for a freely movable joint is:
   a. fibrous.
   b. cartilaginous.
   c. synovial.
   d. gomphosis.
   ANS: C REF: 12

22. Which of the following joints displays a “hinge” type of movement?
   a. Trochoid
   b. Ellipsoidal
   c. Sellar
   d. Ginglymus
   ANS: D REF: 13

23. Which of the following joints is NOT a synovial joint?
   a. Skull suture
   b. Elbow joint
   c. Hip joint
   d. Proximal radioulnar joint
   ANS: A REF: 12 | 14

24. Which of the following is classified as a sellar joint?
   a. Ankle joint
   b. Temporomandibular joint
   c. Knee joint
   d. Intercarpal joint
   ANS: A REF: 14

25. Which of the following is classified as a bicondylar joint?
   a. Shoulder joint
   b. Temporomandibular joint
   c. First and second cervical vertebra joint
   d. Distal radioulnar joint
   ANS: B REF: 14

26. An upright position with the arms abducted, palms forward, and head forward describes the _____ position.
   a. anteroposterior (AP)
   b. decubitus
   c. anatomic
   d. oblique
   ANS: C REF: 15

27. A representation of the patient’s anatomic structures that can be obtained, viewed, manipulated, and stored digitally is the definition for:
   a. radiograph.
   b. radiography.
   c. radiographic image.
   d. radiographic examination.
   ANS: C REF: 15

28. The vertical plane that divides the body into right and left halves describes the _____ plane.
   a. coronal
   b. median or midsagittal
   c. longitudinal
   d. horizontal
   ANS: B REF: 16

29. A longitudinal plane that divides the body into equal anterior and posterior parts is the _____ plane.
   a. midcoronal
   b. midsagittal
   c. horizontal
   d. oblique
   ANS: A REF: 16

30. Which of the following terms describes the sole of the foot?
   a. Palmar
   b. Dorsum
   c. Volar
   d. Plantar
   ANS: D REF: 17
31. Which term describes the back or posterior aspect of the hand?
   a. Dorsum pedis
   b. Dorsum manus
   c. Palmar
   d. Volar
   ANS: B   REF: 17

32. A lateromedial projection is one in which the lateral aspect of the anatomy part is closest to the image receptor (IR).
   a. True
   b. False
   ANS: B   REF: 18

33. A position in which the head is lower than the feet is:
   a. Trendelenburg.
   b. lithotomy.
   c. Fowler’s.
   d. recumbent.
   ANS: A   REF: 19

34. Which term describes lying down in any position?
   a. Horizontal
   b. Fowler’s
   c. Recumbent
   d. Anatomic
   ANS: C   REF: 19

35. A recumbent oblique position in which the patient is lying on the left anterior side rotated anteriorly, with the right knee and thigh flexed is termed:
   a. Trendelenburg.
   b. left posterior oblique.
   c. Sims’ position.
   d. Fowler’s position.
   ANS: C   REF: 19

36. A patient is lying on her back facing the x-ray tube. The right side of her body is turned 20° toward the image receptor. What is this radiographic position?
   a. LPO (left posterior oblique)
   b. RPO (right posterior oblique)
   c. RAO (right anterior oblique)
   d. LAO (left anterior oblique)
   ANS: B   REF: 20

37. A patient is erect with the left side directly against the image receptor. The central ray (CR) enters the right side of the body. What is this radiographic position?
   a. Right lateral
   b. Left lateral decubitus
   c. Left lateral
   d. Dorsal decubitus
   ANS: C   REF: 21

38. A patient is lying on her back. The x-ray tube is horizontally directed with the CR entering the right side of the body. The image receptor is adjacent to the left side of the body. What is the radiographic position?
   a. Left lateral decubitus
   b. Left lateral
   c. Right lateral decubitus
   d. Dorsal decubitus
   ANS: D   REF: 21

39. A patient is erect facing the image receptor. The left side of the body is turned 45° toward the image receptor. The CR enters the posterior aspect of the body and exits the anterior. What is this radiographic position?
   a. LAO
   b. LPO
   c. Left lateral
   d. Posteroanterior (PA)
   ANS: A   REF: 20

40. What type of projection is created with the CR directed along or parallel to the long axis of the body?
   a. Axial
   b. Tangential
   c. Lordotic
   d. Transthoracic
   ANS: A   REF: 22
41. A projection in which the CR skims a body part is termed:
   a. tangential.
   b. lordotic.
   c. axial.
   d. decubitus.
   ANS: A    REF: 22

42. What is the general term for a position in which the long axis of the body is angled in relationship to the image receptor rather than the central ray (e.g., special chest projection)?
   a. Axial
   b. Trendelenburg
   c. Decubitus
   d. Lordotic
   ANS: D    REF: 22

43. The opposite term for supination is:
   a. protraction.
   b. adduction.
   c. pronation.
   d. retraction.
   ANS: C    REF: 27

44. Which of the following positions is often used to insert a rectal enema tip before a barium enema study?
   a. Fowler’s
   b. Modified Sims’
   c. Lithotomy
   d. Trendelenburg
   ANS: B    REF: 19

45. Tangential and axial projections are the same type of projection.
   a. True
   b. False
   ANS: B    REF: 22

46. A dorsoplantar projection would be a radiographic study of:
   a. any anatomic region.
   b. the hand.
   c. the foot.
   d. the skull.
   ANS: C    REF: 23

47. Moving the foot and toes downward is:
   a. eversion.
   b. inversion.
   c. dorsiflexion.
   d. plantar flexion.
   ANS: D    REF: 26

48. Movement in the form of a circle is the definition for:
   a. rotation.
   b. retraction.
   c. circumduction.
   d. protraction.
   ANS: C    REF: 28

49. Radiographic view is NOT a valid positioning term in the United States.
   a. True
   b. False
   ANS: A    REF: 29

50. Which of the following terms is the opposite of ipsilateral?
   a. Medial
   b. Deviation
   c. Contralateral
   d. Axiolateral
   ANS: C    REF: 24 | 29

51. The term position can be used for both a lateral and an oblique body position.
   a. True
   b. False
   ANS: A    REF: 29
52. The radiographic term *projection* is defined as:
   a. general position of the patient.
   b. path or direction of the central ray.
   c. radiographic image as seen from the vantage of the image receptor.
   d. computer-assisted image.

   **ANS:** B  **REF:** 29

53. According to the American Registry of Radiologic Technologists (ARRT) Code of Ethics, a radiologic technologist may render a diagnosis during a radiographic examination if requested by the patient.
   a. True
   b. False

   **ANS:** B  **REF:** 32

54. According to the ARRT Code of Ethics, radiologic technologists must participate in continuing education activities throughout their professional career.
   a. True
   b. False

   **ANS:** A  **REF:** 32

55. According to the ARRT Code of Ethics, a radiologic technologist may discuss any patient’s clinical history with another health professional.
   a. True
   b. False

   **ANS:** B  **REF:** 32

56. Which of the following is NOT one of the evaluation criteria used in the evaluation of images?
   a. Patient condition
   b. Anatomy demonstrated
   c. Collimation and CR
   d. Exposure criteria

   **ANS:** A  **REF:** 30

57. It is legally acceptable to write “right” or “left” on a radiograph if the anatomic side marker is not visible.
   a. True
   b. False

   **ANS:** B  **REF:** 31

58. A patient enters the emergency department (ED) with a piece of wire in the palm of the hand. What is the minimum number of projections required to be taken for this radiographic study?
   a. One
   b. Two
   c. Three
   d. Four or more

   **ANS:** B  **REF:** 33

59. The radiographer has the responsibility of communicating with the patient to obtain pertinent clinical information.
   a. True
   b. False

   **ANS:** A  **REF:** 32

60. The radiographer may provide a preliminary interpretation of the radiographic study if requested by the patient.
   a. True
   b. False

   **ANS:** B  **REF:** 32

61. Which of the following radiographic procedures often only requires a single AP projection be taken?
   a. Finger
   b. Ribs
   c. Chest
   d. Pelvis

   **ANS:** D  **REF:** 33 | 34

62. What is the final step taken before making the exposure during a positioning routine?
   a. Image receptor centering
   b. Placing anatomic markers on image receptor
   c. Ensuring correct gonadal shield placement
   d. Collimation adjustments

   **ANS:** C  **REF:** 61
63. What is the minimal number of projections taken for a study of the femur?
   a. One
   b. Two
   c. Three
   d. Four
   ANS: B  REF: 34

64. What is the minimal number of projections taken for a study of the right hip?
   a. One
   b. Two
   c. Three
   d. Four
   ANS: B  REF: 34

65. What is the minimal number of projections taken for a postreduction (to realign a fracture) study of the ankle?
   a. One
   b. Two
   c. Three
   d. Four
   ANS: B  REF: 34

66. What is the minimal number of projections taken for a study of the knee?
   a. One
   b. Two
   c. Three
   d. Four
   ANS: C  REF: 34

67. It is common practice to view a PA projection with the patient’s left facing the viewer’s right.
   a. True
   b. False
   ANS: A  REF: 35

68. PA or AP oblique projections are placed on the view box with the patient’s right side of the body facing the viewer’s right.
   a. True
   b. False
   ANS: B  REF: 35

69. Decubitus chest projections are placed for viewing the way the image receptor “sees” them.
   a. True
   b. False
   ANS: B  REF: 35

70. When placing radiographs of the hand on the view box, the digits should be pointing upward.
   a. True
   b. False
   ANS: A  REF: 35

71. When placing radiographs of the lower leg, the toes of the foot must be pointing upward.
   a. True
   b. False
   ANS: B  REF: 35

72. When viewing a CT (computed tomography) or MRI (magnetic resonance imaging) image, the patient’s right is facing the viewer’s left.
   a. True
   b. False
   ANS: B  REF: 35

73. A patient is erect with his left side of the chest placed against the image receptor. The central ray enters the left side of the upper chest and exits the right. Which specific position has been performed?
   a. Dorsal decubitus
   b. Transthoracic lateral
   c. Right lateral
   d. Ventral decubitus
   ANS: B  REF: 23
74. A patient is erect facing the x-ray tube and leaning the shoulders backward 20° to 30° toward the IR. The central ray is perpendicular to the IR. What specific position has been performed?
   a. Lordotic
   b. Axial
   c. Kyphotic
   d. Tangential

   ANS: A  REF: 22

75. The top of the foot is placed against the image receptor with the perpendicular central ray entering the sole of the foot. What specific projection has been performed?
   a. Transpedal
   b. Plantodorsal
   c. Axial dorsoplantar
   d. Tangential plantodorsal

   ANS: B  REF: 23

76. The patient is lying on her right side on a cart. The anterior surface of the patient is against the image receptor. A horizontal central ray enters the posterior surface and exits the anterior surface of the body. What specific projection/position has been performed?
   a. AP
   b. PA
   c. Right lateral decubitus
   d. Left lateral decubitus

   ANS: C  REF: 21

77. The patient’s head and neck are hyperextended with the top of the skull directly against the image receptor. The central ray enters just below the chin. Which specific projection has been performed?
   a. Submentovertical
   b. Acanthioparietal
   c. Parietoacanthial
   d. Verticosubmental

   ANS: D  REF: 23

78. Which of the following is NOT one of the four image quality factors of an analog radiograph?
   a. Contrast
   b. Detail
   c. Source image receptor distance (SID)
   d. Distortion

   ANS: C  REF: 37

79. The amount of blackness seen on a processed radiograph is called:
   a. fog.
   b. scatter.
   c. contrast.
   d. density.

   ANS: D  REF: 37

80. Which of the following factors primarily controls radiographic density in the analog image?
   a. kV
   b. mAs
   c. Film-screen speed
   d. Optimal immunomodulating dose (OID)

   ANS: B  REF: 37

81. A radiograph of the hand is underexposed and nondiagnostic. The following analog (film screen) exposure factors were used: 50 kV, 2 mAs, 40-inch (102 cm) SID. Which of the following sets of exposure factors should be used during the repeat exposure?
   a. 50 kV, 8 mAs, 40 inches (102 cm)
   b. 50 kV, 1 mAs, 40 inches (102 cm)
   c. 60 kV, 4 mAs, 40 inches (102 cm)
   d. 50 kV, 4 mAs, 40 inches (102 cm)

   ANS: D  REF: 40

82. A ____% increase in kV will increase density the same as doubling the mAs.
   a. 15
   b. 10
   c. 100
   d. 25

   ANS: A  REF: 40
83. Exposure time is usually expressed in units of:
   a. seconds.
   b. nanoseconds.
   c. microseconds.
   d. milliseconds.
   
   ANS: D REF: 36

84. What is the primary controlling factor for radiographic contrast?
   a. kV
   b. mA
   c. Film-screen speed
   d. SID

   ANS: A REF: 40

85. Which of the following radiographic studies would best benefit by applying the anode heel effect?
   a. Hand
   b. Skull
   c. Thoracic spine
   d. Ribs

   ANS: C REF: 38

86. The intensity of the x-ray beam is greatest under the anode as defined by the anode heel effect.
   a. True
   b. False

   ANS: B REF: 38

87. Which of the following devices can be used rather than applying the anode heel effect to compensate for anatomic part thickness differences?
   a. Compensating filters
   b. Copper filters
   c. Graded screens
   d. Added filtration

   ANS: A REF: 39

88. Short scale contrast (in the analog image) is the result of:
   a. scatter radiation.
   b. collimation.
   c. high kV.
   d. low kV.

   ANS: D REF: 40

89. What is the most effective method to reduce the production of scatter radiation?
   a. Increase kV.
   b. Increase mAs.
   c. Collimate.
   d. Use a grid.

   ANS: C REF: 62

90. A radiograph of the abdomen is underexposed and must be repeated. The original analog exposure factors used were 65 kV with 25 mAs. The technologist decides to keep the mA at the same level but change the kV to increase radiographic density. How much of an increase is needed in kilovoltage to double the density?
   a. 3 to 5 kV
   b. 9 to 10 kV
   c. 10 to 15 kV
   d. 15 to 20 kV

   ANS: B REF: 40

91. What type of radiographic contrast is produced with a high (120) kV technique?
   a. Low contrast, short scale
   b. High contrast, short scale
   c. Low contrast, long scale
   d. High contrast, long scale

   ANS: C REF: 40

92. Which of the following controlling factors will most affect radiographic resolution?
   a. kV
   b. mAs
   c. Filtration
   d. Focal spot size

   ANS: D REF: 42-43
93. The unsharp edge of the projected image is termed:
   a. distortion.
   b. penumbra.
   c. edge loss.
   d. margin distortion.
   
   **ANS: B**   **REF: 42**

94. A radiograph of the abdomen demonstrates involuntary motion caused by bowel peristalsis (involuntary contractions). Which of the following factors will best eliminate this problem during the repeat exposure?
   a. Decrease SID.
   b. Turn patient into prone position rather than supine.
   c. Use higher kV.
   d. Decrease exposure time.
   
   **ANS: D**   **REF: 43**

95. Which of the following changes will improve spatial resolution?
   a. Decrease SID.
   b. Decrease OID.
   c. Decrease kV.
   d. None of the above will improve spatial resolution.
   
   **ANS: B**   **REF: 45**

96. Increasing the SID will increase distortion of the anatomy.
   a. True
   b. False
   
   **ANS: B**   **REF: 44**

97. A 40-inch (102 cm) SID should be the minimal distance used for most radiographic projections.
   a. True
   b. False
   
   **ANS: A**   **REF: 45**

98. Increasing the SID to 48 inches (123 cm) from 40 inches (102 cm) and adjusting the mAs accordingly will:
   a. increase penumbra.
   b. along with the use of a small focal spot, decrease penumbra.
   c. decrease patient skin dose but increase internal dose because of an increase in scatter radiation.
   d. have no effect on image sharpness or on patient dose.
   
   **ANS: B**   **REF: 45**

99. Using a table Bucky device will increase magnification of the anatomy as compared with performing the same study on the tabletop.
   a. True
   b. False
   
   **ANS: A**   **REF: 41**

100. The least possible distortion of the anatomy occurs at the point of the central ray.
   a. True
   b. False
   
   **ANS: A**   **REF: 46**

101. Each digital image is two dimensional and is formed by a matrix of:
   a. bytes.
   b. algorithms.
   c. voxels.
   d. pixels.
   
   **ANS: D**   **REF: 47**

102. Highly complex mathematical formulas applied during digital processing of the image are termed:
   a. pixels.
   b. algorithms.
   c. digital filters.
   d. matrices.
   
   **ANS: B**   **REF: 47**

103. The intensity of light that represents the individual pixels in the digital image on the monitor is the definition for:
   a. contrast.
   b. spatial resolution.
   c. brightness.
   d. noise.
   
   **ANS: C**   **REF: 48**
104. The wide dynamic range of digital imaging systems results in fewer repeat exposures, increased efficiency, and operating cost reduction as compared with analog (film screen) systems.
   a. True
   b. False
   ANS: A  REF: 54

105. In digital imaging, the term exposure indicator replaces the analog (film-based) term density.
   a. True
   b. False
   ANS: B  REF: 57

106. Which of the following factors has the greatest effect on the brightness of the digital image?
   a. kV
   b. mAs
   c. Processing software
   d. Matrix size
   ANS: C  REF: 48

107. The ability of a digital imaging system to distinguish between similar tissues is the definition for:
   a. edge enhancement.
   b. contrast resolution.
   c. sensitivity.
   d. system response.
   ANS: B  REF: 48

108. Contrast in the digital image is primarily affected by:
   a. kV.
   b. mAs.
   c. matrix size.
   d. predetermined algorithms.
   ANS: D  REF: 48

109. The greater the bit depth of a digital system, the greater the:
   a. brightness.
   b. resolution.
   c. exposure index.
   d. contrast resolution.
   ANS: D  REF: 48

110. Which of the following factors has the greatest effect on resolution of the digital image?
   a. Acquisition pixel size
   b. Display pixel size
   c. Use of a grid
   d. SID
   ANS: A  REF: 49

111. Misrepresentation of object size or shape as projected onto radiographic recording media is the general definition for:
   a. penumbra.
   b. distortion.
   c. magnification.
   d. margin loss.
   ANS: B  REF: 49

112. The number of x-ray photons that strike the digital receptor can be considered as:
   a. noise.
   b. kV.
   c. signal.
   d. density.
   ANS: C  REF: 50

113. A numerical value that is representative of the amount of radiation that strikes the digital image receptor is termed:
   a. algorithm.
   b. variance
   c. signal-to-noise ratio (SNR).
   d. exposure indicator.
   ANS: D  REF: 49

114. A random disturbance that obscures or reduces clarity is termed:
   a. signal.
   b. noise.
   c. electrical fluctuation.
   d. variance.
   ANS: B  REF: 50
115. The intensity of light that represents the individual pixels in the image on the monitor defines:
   a. density.
   b. brightness.
   c. contrast.
   d. spatial resolution.
   ANS: B  REF: 48

116. A low SNR is desirable in digital imaging.
   a. True
   b. False
   ANS: B  REF: 50

117. Which of the following factors has the greatest negative impact on SNR?
   a. Excessive kV
   b. Collimation
   c. Insufficient mAs
   d. Long SID
   ANS: C  REF: 50

118. Which device or technique is most effective in controlling scatter radiation in digital imaging?
   a. Focal spot size
   b. Added filtration
   c. Post-processing algorithm
   d. Grid
   ANS: D  REF: 40-41

119. The application of specific image processing to increase the visibility of the image margins is the definition for:
   a. smoothing.
   b. edge enhancement.
   c. magnification.
   d. image reversal.
   ANS: B  REF: 51

120. The number of shades of gray that can be demonstrated by each pixel is the definition for:
   a. brightness.
   b. equalization.
   c. edge enhancement.
   d. bit depth.
   ANS: D  REF: 48

121. The photostimulable storage phosphor (PSP) imaging plate is light sensitive and must be processed in a dark environment.
   a. True
   b. False
   ANS: B  REF: 52

122. A PSP-based digital imaging system may be cassette based or cassette-less.
   a. True
   b. False
   ANS: A  REF: 52

123. Thin film transistor (FPD-TFT) digital imaging systems are commonly referred to as digital radiography (DR).
   a. True
   b. False
   ANS: A  REF: 54

124. The term portrait describes the long dimension of the image receptor that is aligned _____ to the long axis of the anatomy.
   a. perpendicular
   b. diagonal
   c. parallel
   d. transverse
   ANS: C  REF: 55

125. What type of material makes up the receptor in the FPD-TFT system?
   a. Amorphous selenium
   b. Amorphous silicon
   c. Calcium tungstate
   d. Both A and B
   ANS: D  REF: 54
126. PSP imaging plates are scanned with an ultrabright light source to produce the visible image.
   a. True
   b. False
   ANS: B REF: 52

127. Depending on the manufacturer, the PSP image may be viewed on the technologist workstation as quickly as 5 seconds following plate reading.
   a. True
   b. False
   ANS: A REF: 52

128. FPD-TFT–based systems can be used for both grid and nongrid examinations.
   a. True
   b. False
   ANS: A REF: 54

129. Which of the following energy sources will erase any residual latent image from an exposed PSP imaging plate?
   a. Low-dose radiation
   b. Bright light
   c. Heat
   d. Ultraviolet light
   ANS: B REF: 52

130. Lead masking/mats should be used when recording multiple images on the same cassette-based PSP system.
   a. True
   b. False
   ANS: A REF: 53

131. Close collimation is not recommended when using a PSP imaging system.
   a. True
   b. False
   ANS: B REF: 53

132. As a general rule, exposure factors are decreased 5 to 10 kV with digital systems as compared with analog imaging systems.
   a. True
   b. False
   ANS: B REF: 54

133. Digital radiography systems are hypersensitive to the effects of scatter radiation.
   a. True
   b. False
   ANS: A REF: 54

134. Charged couple device (CCD) systems have the potential to produce diagnostic radiographs with low levels of exposure.
   a. True
   b. False
   ANS: A REF: 54

135. A grid can be left in place for most digital radiographic procedures.
   a. True
   b. False
   ANS: A REF: 54

136. A digital storage and image management system defines a:
   a. radiology information system.
   b. digital archive.
   c. hospital information system.
   d. workstation.
   ANS: B REF: 56-57

137. A network system with an array of hardware and software that connects all imaging modalities is termed a(n):
   a. archive.
   b. HIS.
   c. network.
   d. PACS.
   ANS: D REF: 56

138. The acronym PACS refers to picture archiving connection system.
   a. True
   b. False
   ANS: B REF: 56
139. A standard that ensures that all digital imaging equipment can communicate with each other is referred to as:
   a. RIS.
   b. PACS.
   c. DICOM.
   d. HIS.
   ANS: C REF: 56

140. Which of the following is NOT an advantage of a PACS?
   a. Simultaneous viewing of images at multiple locations
   b. Elimination of misplaced, damaged, or missing films
   c. Rapid chemical processing of images
   d. Rapid (electronic) transfer of images within the hospital
   ANS: C REF: 56

141. The electronic transmission of diagnostic images from one location to another for purposes of interpretation and/or consultation generally defines:
   a. image reconstruction.
   b. Internet transfer.
   c. teleradiography.
   d. computed radiographic telegraphy.
   ANS: C REF: 56

142. A “soft-copy radiograph” is defined as a:
   a. radiographic image viewed on a computer monitor.
   b. radiographic image printed on film.
   c. radiographic image placed on a CD.
   d. latent radiographic image on a CR imaging plate.
   ANS: A REF: 57

143. Exposure indicator is a numeric value that is representative of the level of exposure the image receptor has acquired.
   a. True
   b. False
   ANS: A REF: 57

144. PACS should be integrated with a HIS.
   a. True
   b. False
   ANS: A REF: 56

145. The application of specific image processing to reduce noise in an image is termed:
   a. filtration.
   b. photon degradation.
   c. attenuation.
   d. smoothing.
   ANS: D REF: 51

146. A series of “boxes” that gives form to the image is the definition for:
   a. acquisition matrix.
   b. pixels.
   c. bit depth.
   d. display matrix.
   ANS: D REF: 57

147. Range of exposure intensities that will produce an acceptable image is the definition for exposure:
   a. latitude.
   b. level.
   c. index.
   d. range.
   ANS: A REF: 36

148. Changing or enhancing the electronic image to view it from a different perspective or improve its diagnostic quality is the general definition for:
   a. smoothing.
   b. edge enhancement.
   c. post-processing.
   d. algorithmic conversion.
   ANS: C REF: 51
149. What is the term describing the energy of the x-ray photon in digital imaging?
   a. Milliamperage
   b. mAs
   c. Signal
   d. Kilovoltage
   **ANS: D**  **REF: 40**

150. What is the complete term for RIS?
   a. Radiographic imaging system
   b. Radiology interpretation system
   c. Radiology information system
   d. Reduced intensity system
   **ANS: C**  **REF: 56**

151. The complete term for SNR is signal-to-noise:
   a. relationship.
   b. ratio.
   c. rationale.
   d. reaction.
   **ANS: B**  **REF: 50**

152. Which term has replaced exposure in describing the amount of energy transferred to a mass of air by the photons?
   a. REM
   b. Air kerma
   c. Coulomb per kilogram
   d. Roentgen
   **ANS: B**  **REF: 58**

153. Which radiation unit of measurement is used to describe absorbed dose?
   a. Roentgen
   b. RAD
   c. Rem
   d. Coulomb
   **ANS: B**  **REF: 58**

154. One gray equals 1000 rads.
   a. True
   b. False
   **ANS: B**  **REF: 58**

155. Système International (SI) has been the national standard for units of radiation measurement since 1958.
   a. True
   b. False
   **ANS: A**  **REF: 58**

156. Which traditional unit of radiation measurement describes patient dose?
   a. Roentgen
   b. Rem
   c. Coulombs
   d. Rad
   **ANS: D**  **REF: 58**

157. What is the annual whole body effective dose (ED) for a technologist?
   a. 10 mSv (1 rem) times the years of age
   b. 20 mSv (200 mrem)
   c. 50 mSv (5 rem)
   d. 500 mSv (50 rem)
   **ANS: C**  **REF: 58**

158. The annual occupational dose limit for the lens of the eye is:
   a. 150 mSv (15,000 mrem)
   b. 1 mSv (100 mrem)
   c. 50 mSv (5 rem)
   d. 500 mSv (50 rem)
   **ANS: A**  **REF: 58**

159. Where should a personnel dosimeter be worn during fluoroscopy?
   a. On collar inside the lead apron
   b. On waist inside the lead apron
   c. On collar outside the lead apron
   d. On sleeve outside the lead apron
   **ANS: C**  **REF: 59**
160. Thermoluminescent and optically stimulated luminescence dosimeters must be changed every 14 days to ensure an accurate recording of exposure to the technologist.
   a. True
   b. False
   ANS: B REF: 59

161. Which of the following is NOT an ALARA concept?
   a. Collimate when feasible.
   b. Always wear a personnel dosimeter.
   c. Use optimal kV techniques.
   d. Have older technologist always hold patients.
   ANS: D REF: 59

162. Which of the following is NOT one of the cardinal principles of radiation protection?
   a. Shielding
   b. Filtration
   c. Time
   d. Distance
   ANS: B REF: 61

163. Pregnant technologists should not exceed ____ dose per month.
   a. 1 mSv (0.1 rem)
   b. 0.5 mSv (50 mrem)
   c. 10 mSv (1 rem)
   d. 300 mSv (30 rem)
   ANS: B REF: 60

164. Which of the following patient dose categories carries the highest numerical value of all patient doses?
   a. Effective dose
   b. Gonadal dose
   c. Midline dose
   d. Entrance skin exposure
   ANS: D REF: 60

165. The cumulative (ED) lifetime dose for an occupationally exposed worker is _____ mSv x years of age.
   a. 100
   b. 50
   c. 10
   d. 1
   ANS: C REF: 58

166. Which of the following radiographic projections will provide the greatest amount of effective dose to a female patient (without shielding)?
   a. AP pelvis
   b. Lateral upper gastrointestinal
   c. AP skull
   d. AP abdomen (using 70 kV)
   ANS: B REF: 63-67

167. What type of collimator will automatically restrict the x-ray beam to the size of the image cassette or image receptor?
   a. Diaphragm
   b. Positive beam limitation
   c. Manual collimator
   d. Electronic focused beam
   ANS: B REF: 62

168. What type of protective shield is NOT in contact with the patient’s body?
   a. Shadow shield
   b. Shaped shield
   c. Lead mat
   d. Gonadal flat shield
   ANS: A REF: 63

169. The adjustable collimator light field must be accurate within 5% of the selected SID.
   a. True
   b. False
   ANS: B REF: 62
170. A 20-year-old woman is brought into radiology from the ED with a possible fracture of the pelvis. What should the technologist do regarding gonadal shielding?
   a. Perform a PA projection of the pelvis and use gonadal shielding.
   b. Take AP projection of pelvis without using any shielding.
   c. Cover the area of the ovaries and uterus with a gonad shield for the AP pelvis projection.
   d. Refuse to take any radiographs without the radiologist’s consent.
   Ans: B  Ref: 63

171. Which of the following precautions reduces radiation exposure to the technologist during a fluoroscopic procedure to the greatest degree?
   a. Wearing a protective lead apron of 1-mm lead thickness
   b. Wearing a thyroid shield
   c. Standing as far away as possible from the radiation scatter fields
   d. Turning your back to the fluoroscopy table
   Ans: C  Ref: 66

172. When correctly placed, gonadal shielding will reduce gonadal dose by ____ if gonads are in the primary x-ray field.
   a. 20% to 50%
   b. 50% to 90%
   c. 100%
   d. None of the above
   Ans: B  Ref: 63

173. Grid use during fluoroscopy will lead to a higher dose to the patient.
   a. True
   b. False
   Ans: A  Ref: 66

174. Use of gonadal shielding is necessary when the organ of concern lies within or near _____ of the primary beam unless such shielding obscures essential diagnostic information.
   a. 10 inches (25 cm)
   b. 2 inches (5 cm)
   c. 1 inch (2.5 cm)
   d. 6 inches (15 cm)
   Ans: B  Ref: 64

175. The minimum total filtration (inherent plus added) required for diagnostic x-ray equipment producing 70 kV or greater is ____ mm aluminum equivalent.
   a. 1.5
   b. 2.5
   c. 0.5
   d. 4
   Ans: B  Ref: 61

176. The Image Wisely program is focused on reducing unnecessary exposure in children during imaging procedures.
   a. True
   b. False
   Ans: B  Ref: 67

MATCHING

Select the correct definition for the terms listed below. (Use each choice only once.)
   a. Caudad
   b. Proximal
   c. Extension
   d. Radial deviation
   e. Inversion
   f. Dorsiflexion
   g. Adduction
   h. Abduction
   i. Pronation

1. Movement of an arm or leg toward the midline
   2. An inward stress movement of foot
   3. Near the source or the beginning
   4. A CR angle away from the head end
   5. Increasing the angle of a joint
   6. Movement of an arm or leg away from the midline
   7. Decrease angle between foot and lower leg
   8. Turn or bend hand and wrist toward radius
   9. Rotation of hand with palm down

1. Ans: G  Ref: 27
2. Ans: E  Ref: 26
Select the minimum number of projections generally required for each of the anatomic structures.

a. One projection
b. Two projections
c. Three projections

10. Femur
11. Chest
12. Foot
13. Finger
14. Forearm
15. Ankle
16. Elbow
17. Pelvis

Match the traditional image receptor (IR) sizes to their metric equivalent.

a. 35 × 43 cm
b. 18 × 24 cm
c. 30 × 35 cm
d. 24 × 24 cm
e. 24 × 30 cm

18. 10 × 12 inches
19. 14 × 17 inches
20. 8 × 10 inches
21. 9 × 9 inches
22. 11 × 14 inches

18. ANS: E REF: 55
19. ANS: A REF: 55
20. ANS: B REF: 55
21. ANS: D REF: 55
22. ANS: C REF: 55
